Posted by Trevor Bunch, 2026-09-22.

The NoneAssigned_37 test run is complete. Outputs are in ~/Downloads/noneassigned_37_contact_research/, and the v1.6 tooling behaved as designed with one renderer bug found and fixed along the way.

Deliverables

- noneassigned_37_Enriched.xlsx with six sheets: Contact Enrichment (37 rows, 59 columns), Summary, Upload Prep – Contacts, Upload Prep – Notes, Methodology, Sources (190 rows).
- profiles/ with 37 PDFs, every one named None_Assigned_{Last}_{First}_{Id}_profile.pdf with an "OWNER: NONE ASSIGNED" badge.
- state/ with all contact JSON, 8 company records, and orchestration/ with the ledger, queue, and fragments.

Time and tokens by stage (from orchestrate.py stats, measured only)

Stage	Wall time	Tokens
Init	21 s	0
HubSpot pull (2 batches, 200 engagements)	3 min 25 s	0 (API only)
Research (8 subagents, all concurrent)	10 min 59 s	980,945
Render (workbook + 37 PDFs)	2 s	0
Overall	16 min 07 s	

Per contact: 26,512 tokens, in line with the 23,000 to 25,000 seen in prior runs. All 8 agents reported usage; none failed, so no rerun groups. Range 86,041 to 148,022 per agent, 371 tool uses, 197 searches, 89 fetches.

Results

Match confidence	Count	Household confidence	Count
High	21	High	18
Moderate	8	Moderate	8
Low	4	Low	2
None	4	None	9

All on Fable 5.1, no forced merges, no digit-run rejections outside URLs, no prefix violations. 11 contacts carry a possible-duplicate flag. The four Nones are Cates, Nixon, Lee, and Blair, each with a documented reason.

What the v1.6 changes did in practice

- "None Assigned" appeared consistently in the pulled state, the workbook column, the PDF badge, and all 37 filenames.

noneassigned run report

- The IMPORT rule produced zero household-pair artifacts on 29 imported records. Seven contacts have a Spouse label, and subagents still found probable spouses for several unlabeled records.
- No subagent needed to run a payload script, and none reported a classifier denial.
- URL exemption held: no source URL tripped the account screen. One merge was still rejected because a subagent wrote a Wyoming Secretary of State entity number in prose. That is a public identifier the governance now permits, so the 13 to 19 digit pattern remains a friction point for entity numbers outside URLs.
- Renderer bug found and fixed in the skill: one contact's HubSpot note exceeded a page and crashed the PDF build. `build_profiles.py` now strips HTML and clips each note body to 400 characters. Prior runs had masked this with a scratch script. Lint passes and the zip is rebuilt.

Items for the relationship manager

- William Coody (29166034050) is reported deceased on August 6, 2026 by a Tulsa World obituary matched on name and city only. HubSpot shows him as an active Full Access fund holder. Verify before any outreach and check for a successor advisor.
- Warren Richards (29167065441) shares a mailbox with Bowman Richards and may be his father or minor son. Identity unresolved.
- Janet Green's HubSpot ZIP 39107 is a Mississippi code; the property is 38017.
- Unassociated probable spouses with existing HubSpot records: Annette Godfrey, Amy Bouley, Julie Kaylor, Kim Roberts, Leticia Harnung, Lianne Terry, Jenna McCawley, Linda Graeve.
- Likely duplicates: Teeple 220309184157, Godfrey 29167392257, Boutross 187459891021, Tommerup 30974002689, Cates 187097636504.
- Michel Borchardt's HubSpot surname is misspelled "Bochardt".

IT15 items to report to the Technology Team (IT14 Policy 10)

The pull redacted 12 engagement fields on 7 contacts as possible Restricted content. No targeted redactions were needed this run. Subagents reported and did not record a spouse date of birth, aggregator phone numbers, and stock share counts in emails; these are Confidential rather than Restricted and required no action.

This is informational only and is not professional advice. Review by the appropriate internal team is required before use.
